

An ALL-IN-ONE
Accounts Receivable Software

The NEXT GENERATION of Accounts Receivable Software

ARTrail is truly in a class of its own when it comes to addressing the pain points of Collection Agencies. It is designed to easily blend in and effortlessly augment your existing routine, thanks to its Plug-n-Play model. This approach promptly decreases time-to-market, ensuring that your agency can see substantial increase in ROI within a short time span.

STREAMLINED UX DESIGN

Our team of programmers and designers painstakingly brainstormed every ARTrail module a collection agency could possibly need, resulting in a solution with a healthy equation of simplified usage and amplified productivity!

ARTrail's meticulous UX design streamlines the various modules and quite literally, untangles the software for the end-user. The result? A clutter free work space that acts like a personal assistant.

ARTrail also comes fully supplied with our:

All-In-One Call Recording & Auditing Solution, Dispute Management System, Integrated Data Exchange Function, and our Document Imaging and Archival Platform.

ARTRAIL FEATURES

- The Queues and Prioritization features aboard AR Trail make it easy to collaborate between teams. You can create queues for an agent or create a group of agents and assign queue(s) - What's more - you can automate task population on these queues.

- For maximum productivity, ARTrail has been designed with dedicated portals for managing Consumers, Clients & their accounts.
- Automation can be achieved by using ARTrail's built-in workflow interface for tasks including: drag and drop, events and actions, to creating rules for automating all your tasks.
- ARTrail's intelligent payment-posting algorithm, allows for multiple options while disbursing collected funds
- ARTrail features a powerful reports feature which scans all of the data in your system to present crisp operational statistics. These reports are customizable and can be scheduled to refresh on a periodic basis.

“ WE PAINSTAKINGLY
visualized every detail.
The result? ...

” A METICULOUSLY
STREAMLINED
UX DESIGN

First-of-Its-Kind ETL!

ARTrail provides a "first-of-its-kind" inclusion in a collection software solution. While all Collection solutions rely on cleansed and "ready" data, AR Trail helps you extract, bring in Raw Data from numerous sources, transform, standardize the influx of data, and then load, making it available for you to use.
